JUDUL: Apache2

Disusun Oleh :

Nama	:	Amar Hidayat
Nim	:	09030582226017
Kelas	:	TK3A

Langkah-langkah untuk menginstall Apache2 di ubuntu

```
amrun@amar:~$ sudo apt update_
```

Setelah di update baru lah kita memasukkan kode untuk menginstall apache2

```
amrun@amar:~$ sudo apt install apache2
```

Setelah install apache2 lanjut dengan mengaktifkan apache2 nya dengan kode

```
amrun@amar:~$ sudo systemctl enable apache2
```

Setelah di aktifkan kita cek status apache2 dengan kode

```
sudo systemctl status apache2_
```

Jika sudah maka tampilan apache2 nya akan seperti ini

```
amrun@amar:~$ sudo systemctl enable apache2
Synchronizing state of apache2.service with SysV service script with /lib/systemd/systemd-sysv-inst
ll.
Executing: /lib/systemd/systemd-sysv-install enable apache2
amrun@amar:~$ sudo systemctl status apache2
● apache2.service - The Apache HTTP Server

Apache2 Ubuntu Default Page

It works!

This is the default welcome page used to test the correct operation of the Apache2 server after installation on Ubuntu systems. It is based on the equivalent page on Debian, from which the Ubuntu Apache packaging is derived. If you can read this page, it means that the Apache HTTP server installed at this site is working properly. You should **replace this file** (located at `/var/www/html/index.html`) before continuing to operate your HTTP server.

If you are a normal user of this web site and don't know what this page is about, this probably means that the site is currently unavailable due to maintenance. If the problem persists, please contact the site's administrator.

Configuration Overview

Ubuntu's Apache2 default configuration is different from the upstream default configuration, and split into several files optimized for interaction with Ubuntu tools. The configuration system is **fully documented in `/usr/share/doc/apache2/README.Debian.gz`**. Refer to this for the full documentation. Documentation for the web server itself can be found by accessing the **manual** if the `apache2-doc` package was installed on this server.

The configuration layout for an Apache2 web server installation on Ubuntu systems is as follows:

```
/etc/apache2/  
|-- apache2.conf  
|   |-- ports.conf  
|-- mods-enabled  
|   |-- *.load  
|   |-- *.conf  
|-- conf-enabled  
|   |-- *.conf
```
